FLAG

Studies suggest that more than 9 billion metric tons of plastic have been produced since 1950, more than four times the volume of Mt. Everest, and about 75% of it remains in landfills or has entered the environment as pollution. As a material, plastic has many advantages. However, it is difficult to recycle because popular single-use and convenience items, such as packaging and water bottles, are low in quality and value when recycled.

Part of the magic of plastic is that it seemingly lasts forever. But when it cannot be re-used efficiently, it leads to stark [illegible] plastic, twice the size of Texas, floating in the [illegible] consumed by fish and birds and is seeping int[illegible] food.

**Letter from the Chair of Elkinsville Ecological Society**

Many of you have heard about the proposed northward expansion of the interstate, which currently ends just south of Elkinsville. In the recent debate over how this work will go forward, the focus has been on weighing economic costs and benefits. Indeed, many local politicians claim to favor the project because it will bring jobs in the short term and more visitors to Elkinsville in the long term. These politicians also argue that the proposed plan is the least environmentally damaging way to expand the highway farther upstate. This c
the proposed expansion involves not just t
but also the construction of more than a d
highway.

**Stimulus: 2 of 2**

**Which of the following claims is made in this letter?**

- The expansion of the interstate needs to bring environmentally friendly jobs to Elkinsville.
- The expansion of the interstate is crucial for preserving access to the Elkinsville State Park.
- The expansion of the interstate is the most environmentally unfriendly proposal offered by politicians.
- The expansion of the interstate is more environmentally destructive than politicians admit.

Alice was not scared. Not at all. Maybe a little bit. But she was determined to confront the ghost in her house. Alice lived in a farmhouse built in 1921. All of the floors and doors were original; the doors even had skeleton key locks. But by far the most terrifying part of the house was the basement. She kept that door locked and ignored the thumps, crashes, and cries that came from below the house. What made Alice determined to confront the ghost today was the especially loud crashes the previous night. She'd gotten no sleep, convinced the ghost was going to break through the door and do something h
sure, but the ghost would do something.

Alice hadn't seen the ghost, but what else coul
an old house? The one time she had been dow
after buying the house unseen. Once she saw t
jars, she was a little put off. But what made he
locked was the abrupt end of the concrete floor halfway across the room. Because nothing good ever happened in a basement with a dirt floor. Alice had seen enough horror movies to know that.

Alice stared at the basement door, trying to gather enough confidence to

Climbing, vaulting, rolling, and flipping—parkour athletes seem to defy both the laws of physics and the limitations of the human body. Their incredible stunts and tempo push boundaries in a demonstration of athleticism. Participants take on physical and environmental obstacles for the thrill of creatively facing physical challenges and risks. Parkour, also sometimes called free running, uses movements—running, jumping, climbing, and swinging—developed from military obstacle course training. Parkour is an extreme sport, requiring intense physical and mental strength training and self-discipline. P
that allow them to execute intricate and diffi
through obstacles.
