Circus Trees

Gilroy Gardens, located in Gilroy, California, is a unique family theme park renowned not only for its thrilling rides and beautiful gardens but also for its fascinating collection of circus trees. These trees, unlike any others, were originally shaped and bent into intricate patterns and whimsical shapes by Axel Erlandson in the early 20th century. Erlandson was a Swedish American farmer who, intrigued by the natural grafting of two sycamore trees on his property, began to shape young trees using horticultural techniques. His creations became [illegible] due to their extraordinary forms and the atten[illegible]

Egg Replacements in Baking

Eggs are an important staple of many baking recipes. They serve several crucial functions, such as binding, leavening, and providing moisture to the final product. However, some people are unable to consume eggs for a variety of reasons. If you are one of these people, baking can seem daunting. Fortunately, there are several substitutions that will allow you to continue enjoying your delicious treats without using eggs.

Two popular egg replacements are applesauce and banana. These things work well enough to provide moisture to your dessert, but they are suboptimal replacements overall, because providing moisture is only one function of the egg. When using applesauce or banana in place of eggs, you may find that your baked goods crumble or do not rise properly. Luckily, here are other ways to achieve binding and leavening effects that are more similar to those of eggs.

Eggs help emulsify the disparate ingredients of
homogenous batter or dough. To achieve this,
something with protein or fat that will bind to t
quarter cup of plain yogurt, sour cream, or but
either dairy or non-dairy will work just fine. Another option is ground flax or chia seeds. For each egg, combine 1 tablespoon of ground seeds with 3 tablespoons of warm water and leave the mixture to rest at room temperature for about 10 minutes before using.
