Question: 1 of 45

Time Remaining: 00:52:57

FLAG

Dear Aunt Suzanne,

I have a few minutes before I get on the bus from Galway back to Dublin and wanted to tell you how my class trip to Ireland is going. We just spent 2 days on Inis Mor, the largest of the Aran Islands, which are just off the central west coast of Ireland. We took a ferry from Galway, a ride that takes about an hour and was quite gray and stormy.

For an island that is only about 12 square miles, there is a lot to do and see on Inis Mor! After eating steak and vegetable stew and brown bread with butter, we went to the sweater market, where all kinds of woolen products are sold. The Aran Islands are known for their wool because sheep thrive here and generations have used woolen sweaters and hats to survive long cold days of fishing on the open sea. In fact, I learned that each family or clan has its own signature knitting pattern and some are able to tell which family someone belongs to by the pattern of their sweater! The Healy pattern is an interesting combination of twists and braids, and I found you a birthday souvenir with a beautiful example.

The next d… w ancient ruins, a pr… limbed down to a myste… rectangular hole in a s… like it houses a terrible … ifficult to find, and when … Gaelic! Sometimes this island seems stuck in an earlier time.

I'm excited to see you when I get home. I have lots more pictures to share!

Stimulus: 1 of 7

Which of the following sentences accurately summarizes the passage?

- In an email to her aunt, Eva brags about touring Ireland and the extravagant purchases she has made there.
- In an email to her aunt, Eva reports that the Aran Islands contain a strong agricultural community with long-standing traditions.
- On a school trip to Ireland, Eva has spent time in the Aran Islands, where she has learned about the culture and visited several significant landmarks.
- On a personal trip abroad, Eva is focused on seeing as much as possible in a short amount of time and gathering souvenirs for everyone she knows.

FLAG

The Farallon Islands, or *Devil's Teeth*, as they are referred to by sailors, are a group of small islands with rocky, barren terrain and treacherous underwater currents, 48 km (30 miles) off the coast of San Francisco, California. Although the islands are small, with a combined total land area of 0.41 km^2 (0.16 square miles), they are positioned in a major ocean current, which enables them to house dense populations of birds, rodents, seals, and other water mammals.

The abundance of wildlife first attracted Russian and American fur traders in the early 1800s, who then nearly eliminated the seal population in the area. The islands then became an agricultural resource for San Francisco during the Gold Rush era when egg companies began harvesting bird eggs on the islands. In 1863, violence between rival egg companies erupted on the islands (known as the "Egg War"), which inadvertently attracted national attention and provoked lawmakers to pass legislation to protect and rehabilitate the islands' natural ecosystem.

In 1881, an executive order was passed that decreed egging illegal on the Farallons. This [illegible] einforced in 1909 when [illegible] Reservation to [illegible] slands. Protection wa[illegible]s, and over time many of [illegible]

In the preface to Dr. Montessori's Own Handbook, Maria Montessori explains that a preface ought to shed light on the purpose of the text. She also explains that she hopes her book will find its way into family homes where children who are learning every day live. She thanks some famous figures, such as Helen Keller and Anne Sullivan, whose works and lives had a profound effect on Montessori's beliefs about how young people learn.

Stimulus: 1 of 3

Which of the following could be added to the preface to best support the argument that Montessori schools provide a better educational foundation than public schools?

FLAG

The "Pet Rock" was a remarkably popular 1970s fad. The concept was simple, yet ingenious: sell a rock as a pet. It was the perfect pet, requiring no actual care and guaranteed not to cause any trouble. The creator, Gary Dahl, initially conceived the Pet Rock as a tongue-in-cheek critique of the rising complexity and costs of pet care. The concept struck a chord with thousands, turning the Pet Rock into an overnight sensation. For $3.95, buyers received their pet rock nestled on a bed of straw inside a small cardboard carrier (complete with air holes), an instruction manual filled with humorous advice on training and care, and a certificate of authenticity.

FLAG

Mary Shelley published her novel *Frankenstein* in 1818. *Frankenstein* tells the story of a scientist who creates an intelligent but terrifying creature in a laboratory experiment and then is tortured by what he has done. The story is infused with elements of Gothic horror and is representative of the Romantic movement.

Some suggest that *Frankenstein* should be considered the first true science fiction story. However, while the usage of science and technology is a primary theme of the science fiction genre, a facet of that theme is the explanation of the technology. No scientific explanation for the monster's creation is ever given. *Frankenstein* focuses heavily on the moral issues and consequences of creating such a beast, themes far more representative of the Gothic novel.

Summer in the Hamptons

Summer days stretched endlessly as the sun cast golden hues over the Hamptons, where a group of friends had rented a beach house. Every morning, they awoke to the sound of waves crashing and seagulls calling. Days were filled with laughter, games on the sandy beaches, and evenings spent around a crackling bonfire, sharing stories and roasting marshmallows. It was a summer of spontaneous adventures—from sailing on the crisp waters to exploring local art galleries and enjoying fresh seafood. As the weeks passed, their bonds deepened, leaving them with memories that were as radiant as the summer sun itself, promising to return next year.

Differences in the Jurassic and Devonian Eras

The Jurassic and Devonian periods, both part of Earth's extensive prehistoric timeline, are often grouped together in discussions about ancient lifeforms and geologic structures; however, these eras are distinctly different in terms of their environmental conditions, predominant lifeforms, and geological events.

The Devonian period, occurring approximately 419 to 359 million years ago, is famously known as the "Age of Fishes." This era marked significant evolutionary advancements among fish, including the development of the first ray-finned and lobe-finned fishes, which are crucial to the lineage of all land vertebrates. The Devonian seas swarmed with these innovative species, alongside massive reef-building corals and the first ammonites. Devonian-era fossils are primarily found in sedimentary rock layers, which have been subjected to various geological processes over hundreds of millions of years. On land, the Devonian also witnessed the rapid diversification of plants, with the first trees and forests appearing, fundamentally altering the Earth's atmosphere and paving the way for future terrestrial ecosystems.

In c million years ago, falls with as the "Age of Reptiles." This peri the variety and size of dino vertebrates. The Jurassic land ense forests, providing ample resources for herbivorous dinosaurs, which in turn supported a diverse range of predatory theropods. In the seas, the Jurassic period saw prolific marine life, including large ichthyosaurs and plesiosaurs, along with the appearance of the first birds, marking significant avian evolution.

Stimulus: 1 of 3

Based on the passage, which of the following statements describes the predominant lifeforms of the Devonian Period?

- The Devonian Period was characterized by significant evolutionary advancements among fish.
- The Devonian Period featured massive growth in the variety and size of dinosaurs.
- The Devonian Period was dominated by dinosaurs and other large reptiles.
- The Devonian Period marked the appearance of the first birds and advanced marine reptiles.
